-I- FUNCTION: Functions as a cell surface
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              to substitutions of transient metal chelating residues. Beta-APP42 may activate mononuclear phagocytes in the brain and elicit inflammatory responses. Promotes both tau aggregation and TPK II-mediated phosphorylation (By similarity). The gamma-CTF peptides as well as the caspase-cleaved representation.
                                                                                                                                                                                                                                                                   cytoplasmic proteins, including APBB family members, the APBA family, MAPKBIPI, SHC1, Numb and Dab1. Binding to Dab1 inhibits its serine phosphorylation. Also interacts with GPCR-like protein BPP, FPRLI, APPBP1, IB1, KWS2 (via its TPR domains), APPBP2 (via BBS) and DDB1 (By similarity). In vitro, it binds MAPT via the MT-binding domains (By similarity). Associates with microtubules in the presence of ATP and in a kinesin-dependent manner (By similarity). Interacts, through a C-terminal domain, with GNAO1 (By similarity). Amyloid beta-42 binds CHRNA7 in hippocampal neurons (By similarity). Beta-amyloid associates with HADH2 (By
                                                                                                                                                       P98084:Apba2; NbExp=1;

P97318:Dab1; NbExp=1;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 peptides, including C31, are potent enhancers of neuro apoptosis.
SUBUNIT: Binds, via its C-terminus, to the PID domain.
                                                                                                                                                                                                                             INTERACTION:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    copper, zinc and iron. Rat and mouse beta-amyloid peptides bind only weakly transient metals and have little reducing activity of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 FUNCTION: Beta-amyloid peptides are lipophilic metal chelators with metal-reducing activity. Bind transient metals such as
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 reduction. Can regulate neurite outgrowth through binding to components of the extracellular matrix such as heparin and collagen I and IV (By similarity). The splice isoforms that contain the BPTI domain possess protease inhibitor activity
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        with Numb. Couples to apoptosis-inducing pathways such as those mediated by G(O) and JIP. Inhibits G(O) alpha ATPase activity (E similarity). Acts as a kinesin I membrane receptor, mediating the axonal transport of beta-secretase and presentlin 1. May be involved in copper homeostasis/oxidative stress through copper is
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       cell mobility and transcription regulation through protein-protein interactions. Can promote transcription activation through binding to APBBI/Tip60 and inhibit Notch signaling through interaction
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                similarity)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                physiological functions on the surface of neurons relevant to neurite growth, neuronal adhesion and axonogenesis. Involved

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         neurite growth, neuronal adhesion and axonogenesis. Involved in cell mobility and transcription regulation through protein-protein interactions (By similarity). Can promote transcription activation through binding to ApBBI/Tip60 and inhibit Notch signaling through interaction with Numb (By similarity). Couples to apoptosis-inducing pathways such as those mediated by G(O) and JIP. Inhibits G(O) alpha Affase activity. Acts as a kinesin I membrane receptor, mediating the axonal transport of beta-secretase and presentlin 1 (By similarity). May be involved in copper homeostasis/oxidative stress through copper ion reduction. Can regulate neurite outgrowth through binding to components of the extracellular matrix such as heparin and collagen I and IV (By similarity). The splice isoforms that contain the BPII domain possess protease inhibitor activity (By similarity).

**Splice isoforms that contain the BPII domain possess protease inhibitor activity (By similarity).**

**WINCTION: Beta-amyloid peptides are lipophilic metal chelators with metal-reducing activity. Bind transient metals such as copper, zinc and iron. Rat and mouse beta-amyloid peptides bind constructions of transient metal chelators transient metals and have little reducing activity due
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 protein

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 only weakly transient metals and more residues. Beta to substitutions of transient metal chelating residues. Beta may activate mononuclear phagocytes in the brain and elicit inflammatory responses. Promotes both tau aggregation and T mediated phosphorylation (By similarity).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         3iol. Chem. 276:37155-37160(2001).

FUNCTION: Functions as a cell surface receptor and performs physiological functions on the surface of neurons relevant physiological functions.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      672

Genome polyprotein [Contains: P1 proteinase (W-terminal protein);

E Helper component proteinase (EC 3.4.22.45) (HC-pro); Protein P3; 6 kDa

E Helper component proteinase (EC 3.4.22.45) (HC-pro); Nuclear

DE protein 1 (6K1); Cytoplasmic inclusion protein (EC 3.6.1.-) (CI); 6

E kDa protein 2 (6K2); Viral genome-linked protein (VPg); Nuclear

DE inclusion protein A (EC 3.4.22.44) (NI-a) (NIa-pro) (49 kDa

Proteinase) (49 kDa-Pro); Nuclear inclusion protein B (EC 2.7.7.48)

DE (NI-b) (NIb) (RNA-directed NNA polymerase); Coat protein (CP)].

OS Potato virus Y (strain N) (PVY).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     PARTON PA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      밁

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Submitted
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Viruses; ssRNA positive-strand viruses, no DNA stage; Potyviridae;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         may be involved FUNCTION: Both (By similarity)
                                                                                                                                                                      processing by the main proteinase NIa-pro resulting in production of at least ten individual proteins. The pand the HC-pro cleave only their respective C-termini autocatalytically. 6KI is essential for proper proteo separation of P3 from CI (By similarity).

SIMILARITY: Belongs to the potyviruses polyprotein fasimilarity: Contains 1 peptidase C4 domain.

SIMILARITY: Contains 1 peptidase C5 domain.

SIMILARITY: Contains 1 peptidase C5 domain.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           terminus, commonly in the sequence -Tyr-Xaa-Val-Gly-|-Gly, in the processing of the potyviral polyprotein.

DOMAIN: The N-terminus of helper component proteinase is involved in interaction with stylets. The central part is involved in interaction with virions and the C-terminus is involved in cell movement of the virus.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               proteolytic activities.

CATALYTIC ACTIVITY: Hydrolyzes glutaminyl bonds, and activity is further restricted by preferences for the amino acids in P6 - P1' that vary with the species of potyvirus, e.g. Glu-Xaa-Xaa-Tyr-Xaa-Gln-|-(Ser or Gly) for the enzyme from tobacco etch virus. The natural substrate is the viral polyprotein, but of their proteins and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  cell and systemis movement, encapsidation of the viral RNA and in the regulation of viral RNA amplification.
FUNCTION: Nuclear inclusion protein B is a RNA-dependent RNA polymerase that plays an essential role in the virus replication.
FUNCTION: Helper component proteinase is required for aphid transmission and also has proteolytic activity. Interacts with

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                cell and systemis movement, encapsidation of the viral RNA and in the regulation of viral RNA amplification.
-!- FUNCTION: Nuclear inclusion protein B is a RNA-dependent RNA polymerase that plays an essential role in the virus replication.
-!- CATALYTIC ACTIVITY: Nucleoside triphosphate + RNA(n) = diphosphate
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              NUCLEOTIDE SEQUENCE [MRNA].
